518087	2026-04-06 17:56:37	Club	1050.0

Composite matching key (OrderSales <-> FinancialReport):

Order Number + SKU + Quantity + Price (or Product Title) — resolves the 9 repeated Order Number + SKU combinations observed in the raw export.

Data source for this report: real Commerce7 export.

Note on Order Tag: the OrderSales/FinancialReport exports do not include a populated 'Order Tag' column, so Event / Corporate / Friends & Family only trigger if that column exists in the input file. See `sullivan_c7_simulator.py` for the documented finding and the simulated tag model.
